# Base Building Costs

---

	Core Wall	Dual System	BRBF
Code	\$140 M	\$149 M	\$341 M
TBI Guidelines	\$143 M	\$174 M	\$333 M

The diagram illustrates the relationship between the 'Code' and 'TBI Guidelines' for two building systems: 'Core Wall' and 'Dual System'. For the 'Core Wall' system, the cost is \$140 M under the 'Code' and \$143 M under 'TBI Guidelines', with a downward arrow indicating a decrease. For the 'Dual System', the cost is \$149 M under the 'Code' and \$174 M under 'TBI Guidelines', with a diagonal arrow pointing from the 'Code' value to the 'TBI Guidelines' value, indicating a decrease.

**The  
New  
Code**

This code ...“is dedicated to the development of better building construction and greater safety to the public, through the elimination of needless red tape, favoritism and local politics by uniformity in building laws;

An open book with a dark cover and a tassel hanging from the bottom center. The left page is blank and cream-colored. The right page is also cream-colored and contains a block of text in a black, sans-serif font. The text is centered on the page and reads: "This code ... 'is dedicated to the development of better building construction and greater safety to the public, through the elimination of needless red tape, favoritism and local politics by uniformity in building laws; to the granting of full justice to all building materials on the fair basis of the true merits of each material;".

This code ... "is dedicated to the development of better building construction and greater safety to the public, through the elimination of needless red tape, favoritism and local politics by uniformity in building laws; to the granting of full justice to all building materials on the fair basis of the true merits of each material;

This code ...“is dedicated to the development of better building construction and greater safety to the public, through the elimination of needless red tape, favoritism and local politics by uniformity in building laws; to the granting of full justice to all building materials on the fair basis of the true merits of each material; and to the development of a sound economic basis for the future growth of cities through unbiased and equitable dealing with structural design and fire hazards.” ...1946
